

M JEEVAN REDDY

Senior GCP DevOps Engineer | Site Reliability Engineer (SRE) | Cloud Infrastructure & Security

Hyderabad, India | medidajeevanreddy499@gmail.com | +91 8309823797 | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Senior GCP DevOps and Site Reliability Engineer (SRE) with 8+ years of IT experience, including 6.5+ years building, securing and running cloud infrastructure on Google Cloud Platform (GCP).
- Currently looking after Production reliability for an enterprise analytics platform in a regulated banking environment, across DEV, UAT, Pre-production, Production and DR.
- Hands-on with GCP services: Compute Engine, Managed Instance Groups, VPC, Cloud Load Balancing, Cloud DNS, Cloud Armor, IAM, Cloud KMS, Cloud Storage, BigQuery, Cloud SQL, Cloud Monitoring and Cloud Logging.
- Build infrastructure as code (IaC) with Terraform modules and automate configuration with Ansible, Shell and Python.
- Set up and maintain CI/CD pipelines with Git, Jenkins, Maven, SonarQube and Nexus, and deploy containers with Docker, Kubernetes and GKE.
- Look after cloud security and compliance: Cloud Armor WAF, HTTPS load balancing, SSL/TLS certificates, IAM least-privilege access, CMEK encryption and fixing vulnerability and policy findings.
- Plan and run disaster recovery (DR) tests, failover and failback, backups, patch management and golden VM image releases with proper runbooks and rollback plans.
- Handle monitoring and alerting (Cloud Monitoring, Grafana, Prometheus), Production incidents, root cause analysis (RCA) and ITIL change management through ServiceNow, Jira and Confluence.
- Work on cloud cost optimisation (FinOps) by rightsizing VMs, removing unused resources and automating VM schedules, and work closely with application, network, security and platform teams.

CAREER SNAPSHOT

- Currently working as **GCP DevOps Engineer / Site Reliability Engineer (SRE)** at **EY LLP (Client: HSBC)** from **June 2024 – Present**.
- Worked as **DevOps Engineer & SRE** at **HCL Technologies** from June 2021 to June 2023.
- Worked as **DevOps Engineer** at **Smartried Technologies** from June 2017 to May 2021.

TECHNICAL SKILLS

Cloud Platform (GCP)	Compute Engine, Managed Instance Groups (MIG), VPC, Cloud Load Balancing (HTTPS), Cloud DNS, Cloud Armor, IAM, Cloud KMS (CMEK), Cloud Storage, Cloud Scheduler, Storage Transfer Service, Cloud Billing
Data Services	BigQuery, Cloud SQL (PostgreSQL)
Infrastructure as Code	Terraform (reusable modules), Ansible
CI/CD & Release	Git, GitHub, GitLab, Jenkins Pipelines, Maven, Nexus, SonarQube, Release Management
Containers & Orchestration	Docker, Kubernetes, Google Kubernetes Engine (GKE)
Observability	Cloud Monitoring, Cloud Logging, Grafana, Prometheus, Alerting
Cloud Security & Compliance	Cloud Armor WAF (OWASP CRS), IAM least privilege, SSL/TLS (Venafi), firewall policy, CMEK encryption, vulnerability management, DevSecOps, audit evidence
Reliability Engineering	High Availability, Disaster Recovery (DR), Backup & Restore, Incident Management, Root Cause Analysis (RCA), Runbooks, Patch Management, Golden Images
Automation & Scheduling	Python, Shell scripting, Control-M, Cloud Scheduler
FinOps	Cloud cost optimisation, rightsizing, Cloudability
Platforms	Linux, Windows Server, QlikSense, Apache Tomcat
ITSM & Collaboration	ServiceNow (ITIL Change Management), Jira, Confluence

PROFESSIONAL EXPERIENCE

EY LLP (Client: HSBC)

June 2024 – Present

GCP DevOps Engineer / Site Reliability Engineer (SRE)

QlikSense analytics platform on GCP | DEV, UAT, Pre-prod, Prod & DR

- Set up Cloud Armor (WAF) policies with OWASP rules for DEV, UAT, Pre-production and Production. Tested them in preview mode first, then turned on blocking, and checked the logs to fix any access issues users faced.
- Moved applications from TCP to HTTPS load balancers. Worked on forwarding rules, proxies, URL maps, backend services, health checks, static IPs, firewall rules and Cloud DNS records.
- Renewed and updated SSL certificates for Production and Non-Production applications, following the bank's certificate policy.

- Fixed security findings such as extra IAM permissions, firewall rule issues, cloud policy violations and vulnerabilities, making sure accounts only had the access they needed.
- Handled monthly patching and Windows Server upgrades for QlikSense Production and Non-Production. This included taking disk snapshots before changes, doing the deployment, checking everything after, and keeping a rollback plan ready.
- Built and tested golden VM images (immutable infrastructure), and updated Jenkins pipelines for Production deployments and uploading artifacts to Nexus.
- Carried out disaster recovery tests, failover and failback for important applications using Managed Instance Groups, Storage Transfer Service and disk snapshots across projects, and kept the DR runbooks up to date.
- Set up and upgraded Control-M agents, and created Cloud Scheduler jobs to take daily Cloud SQL database backups.
- Reduced cloud costs (FinOps) by rightsizing VMs, cleaning up unused disks and servers, and stopping VMs automatically on weekends.
- Created inventory reports for all GCP resources and storage, set up alerts in Cloud Monitoring, handled Production incidents and RCA, raised and tracked changes in ServiceNow, Jira and Confluence, and gave knowledge transfer sessions to the team.

HCL Technologies

June 2021 – June 2023

DevOps Engineer & SRE

- Wrote reusable Terraform modules to create GCP resources like Compute Engine, VPC, IAM, Cloud Storage and Load Balancer in the same way across all environments.
- Set up Jenkins master and agent nodes so builds could run in parallel, and connected Jenkins with Git webhooks so builds and deployments started automatically.
- Wrote Dockerfiles to package applications and deployed them on Kubernetes and GKE.
- Set up monitoring and alerts using Cloud Monitoring, Cloud Logging, Grafana and Prometheus.
- Worked on Production incidents and found the root cause of issues as part of the SRE team.
- Wrote Python scripts to automate daily tasks, and used Ansible to deploy applications and set up servers.
- Worked with development and operations teams on release planning and infrastructure support.

Smartried Technologies

June 2017 – May 2021

DevOps Engineer

- Set up Jenkins and Maven builds to create JAR and WAR files from source code.
- Installed SonarQube and connected it with Jenkins to check code quality during builds.
- Managed Git and GitHub branches, merges and releases for the application teams.
- Used Ansible playbooks to deploy applications to Apache Tomcat servers.
- Managed Linux servers and Compute Engine VMs, including installing packages, setting up networks and subnets, and fixing deployment issues.
- Set up basic alerts in Cloud Monitoring and Cloud Logging, and worked with Docker, Kubernetes and Terraform as the team started using them.
- Worked with development and QA teams on releases and supported Production issues.
